

BUSINESS GROWTH ENGINEERING · AI-NATIVE

Vee Group

Built on Human Behaviour

We don't market products — we engineer decision pathways.

Founder-led businesses, engineered to grow beyond the founder.

1,890+

documented startup
failures studied

\$500B+

burned revenue mapped
to what went wrong

1,500+

success stories — what
working businesses do right

3

markets — India,
UK and UAE

An AI-native growth engineering firm

VISION

No business should fail without understanding why it isn't growing.

MISSION

Engineer growth systems for founder-led businesses — combining behavioural science with proprietary AI diagnostic intelligence, so every decision is built on how markets actually think, decide and buy.

AI-native by construction — not adoption

Intelligence at the core

The 9-agent diagnostic engine is the firm's centre of gravity — every mandate begins with machine-scale diagnosis.

Proprietary data substrate

1,890+ failure cases, 1,500+ success stories and a 500-framework diagnostic index — an asset competitors cannot replicate by buying tools.

Humans where judgement matters

Engineers and behavioural scientists work above the engine — execution layers are built over it, data layers under it.

Founded by Vaibhav Saini (engineering & operations) and Hiya Chugh (cognitive science & neuromarketing) — two disciplines, one conclusion: growth is engineered, not improvised.

THE PROBLEM

Businesses fail undiagnosed, not unmotivated

1,890+

startup failures documented — \$500B+ in burned revenue, mapped to exactly what went wrong.

The pattern across them: the founders never had a precise, evidence-led answer to one question — why has growth stopped?

Agencies execute without diagnosing

Output is produced. The underlying system failure — a broken funnel, a trust gap, a misread market — is never found.

Consultants diagnose without executing

Advice is delivered and dies in a slide deck. The execution gap is where most strategies quietly fail.

Founders inherit opinions, not evidence

Decisions get made on instinct and anecdote — at exactly the stage where a wrong call is most expensive.

This isn't a marketing problem. It's a decision architecture problem.

THE SOLUTION

One engine. Layers built over and under it.

EXECUTION LAYER — BUILT OVER THE ENGINE

Embedded growth engineering mandates: revenue systems, brand perception, decision-pathway design — humans executing on machine-grade diagnosis.

CORE — 9-AGENT AI DIAGNOSTIC ENGINE

Nine specialised agents interrogate a business the way nine senior diagnosticians would — live on Google Cloud, in active A/B-tested deployment.

INTELLIGENCE SUBSTRATE — BUILT UNDER THE ENGINE

1,890+ failure cases (\$500B+ burned revenue mapped), 1,500+ success stories and a 500-framework diagnostic index — self-learning with every diagnosis run.

“We don't give business advice. We make sure it happens.”

What the engine knows — and how it learns

Failure intelligence

1,890+ documented startup failures — \$500B+ in burned revenue, each case mapped to exactly what went wrong and when.

Success intelligence

1,500+ documented success stories — what working businesses are doing right, so partners know what to preserve and amplify, not just what to fix.

CFO diagnostic module

A full financial diagnosis layer — EBITDA, runway, unit economics, CAC and LTV. The questions a seasoned CFO would ask, encoded and run on every business.

MBA skill module

MBA-grade strategy, operations, marketing and finance frameworks encoded as scoring lenses — a 500-framework diagnostic index applied to every diagnosis.

Self-learning — it will never stay at 1,890. Every completed diagnosis retrains the engine; the corpus compounds with use. Validation filters admit only verified entries — junk submissions never touch the data.

The 7-step managed growth process

1

AI Diagnosis

Engine maps why growth has stalled — before any opinion enters the room

AI-FIRST · HUMAN-MONITORED

2

Behavioural Mapping

Decision pathways: how buyers think, trust and choose

AI-FIRST · HUMAN-MONITORED

3

Growth Architecture

Revenue system, brand and funnel designed as one structure

AI-FIRST · HUMAN-MONITORED

4

Hypothesis & Test

Every intervention framed as a testable hypothesis with metrics

AI-FIRST · HUMAN-MONITORED

5

Embedded Execution

Vee Group teams build inside the business — not as a vendor

HUMAN-FIRST · AI-BACKED DATA

6

Measure & Refine

Outcomes feed back into the engine; the system compounds

AI-FIRST · HUMAN-MONITORED

7

Engineered Scale

Only what is proven gets scaled — built to endure

HUMAN-FIRST · AI-BACKED DATA

Hypothesis. Test. Measure. Refine. Then scale.

What cannot be copied by buying AI tools

Proprietary intelligence asset

1,890+ failure cases, 1,500+ success stories, a 500-framework index — and self-learning, so the corpus compounds with every diagnosis run. Competitors can rent the same models; they cannot rent this.

One system, three disciplines

Strategy, execution and behavioural science engineered together. Agencies have one. Consultancies have another. Nobody holds all three in one structure.

AI-native operating model

The engine isn't a feature bolted onto a services firm. The firm is built around the engine — layers of execution over it, data under it.

Embedded and selective

Partners and mandates, not clients and accounts. Diagnosis before prescription — always. We tell partners what's broken before we say a word about fixing it.

Segmentation, targeting, positioning

SEGMENTATION

- Founder-led businesses at decisive growth stages
- Scaling CEOs with broken marketing–sales alignment
- Family business successors modernising a legacy
- International brands entering India — one market in name, forty in practice

TARGETING

- ₹1Cr–₹50Cr revenue band, founder still at the wheel
- Burned by agencies; paying a premium for certainty
- Selective by design — mandates are chosen, not acquired
- Metro India first: Delhi NCR, then Mumbai and Bengaluru

POSITIONING

- The AI-native growth engineering firm
- Upstream of agencies — we architect the system they would execute within
- Diagnosis before prescription, evidence before opinion
- Built on Human Behaviour

Three phases. Each one funds the next.

Every mandate makes the engine smarter. Every engine improvement makes the next mandate easier to win.

REVENUE MODEL

Four engines of revenue, one intelligence core

Growth engineering retainers

₹1L–₹5L / month

Embedded mandates — the cash-generative base. Live today.

Bounded diagnostics

Fixed fee

Engine-led diagnostic engagements — low-friction entry; the decision to go further is always the partner's.

Diagnostic SaaS

Subscription

Self-serve access to the 9-agent engine for founders and investors — productised in Phase 2.

Equity participation

Carried upside

Stakes in top-performing partners and ventures incubated on the platform — incl. Vee Print.

Target revenue mix — 24 months

■ Retainers ■ Diagnostics ■ SaaS ■ Equity / ventures

Diagnostic intelligence as public infrastructure

Every undiagnosed business failure costs jobs, family savings and founder years. Our thesis is simple — that cost is avoidable when diagnosis is accessible.

MSME resilience

India's small and mid-sized businesses employ over 110 million people. Affordable, engine-led diagnosis keeps more of them alive — and more people employed.

Founder community — Delhi

A pay-it-forward founder ecosystem in Delhi, modelled on San Francisco's collaborative infrastructure — knowledge moves before money does.

Education heritage

Founding team background in teaching and assessment — frameworks, playbooks and failure-case learnings published, not hoarded.

The engine is live. The roadmap compounds it.

Technology Readiness Level — 9-agent diagnostic engine

TRL 7 — operational system deployed on Google Cloud Run, in live A/B testing with real founders, operators and investors.

H2 2026

TRL 8 — engine hardened across 100+ live diagnostics; execution-layer automation; advisory board seated

2027

TRL 9 — diagnostic SaaS launch; Vee Print platform scale; UK & UAE mandate expansion

2028

Angel ecosystem operational; engine licensed to accelerators and investor networks

Built AI-native from the first line of code — no legacy services firm to retrofit.

A diagnostic-led acquisition funnel

AUTHORITY

550-topic content system across 6 pillars — every piece GEARS-validated before publishing

DIAGNOSIS

Bounded engine-led diagnostic — the prospect sees what's broken before any pitch

MANDATE

Selective retainers, ₹1L–₹5L/mo — diagnosis converts to embedded engagement

FLYWHEEL

Outcomes → referrals, equity, community deal flow

Channels in play

- LinkedIn + Instagram authority engine
- Precision founder & investor outreach — peer-toned, proof-led
- Delhi founder community
- Accelerator & advisor network — YC, PearX, Google for Startups

COMPETITIVE LANDSCAPE

Every rival holds a piece. We hold the system.

	Marketing agencies	Strategy consultancies	Generic AI tools	Vee Group
Evidence-led diagnosis	✗	✓	○	✓
Embedded execution	✓	✗	✗	✓
Behavioural science core	✗	○	✗	✓
Proprietary failure-case intelligence	✗	✗	✗	✓
Compounding data flywheel	✗	✗	○	✓

Agencies execute. Consultancies advise. AI tools answer prompts. None of them diagnose, execute and learn inside one system.

MARKET OPPORTUNITY

A large market. A precise wedge.

TAM — ₹2.4 lakh Cr (~US\$28B)

India's combined spend on marketing, advertising and business advisory services — growing in double digits annually

SAM — ₹26,000 Cr (~US\$3B)

Growth-stage, founder-led businesses in metro India buying retained growth, strategy and diagnostic services

SOM — ₹40Cr by 2029

200 retained mandates + diagnostic SaaS + platform revenue across Delhi NCR, Mumbai and Bengaluru

Sizing is directional, built bottom-up from mandate economics — full model available in the data room.

THE RAISE

Pre-seed: ₹1.5–2Cr for 18–24 months of runway

₹1.5–2Cr

raise size

₹8–10Cr

pre-money valuation

15–20%

equity offered

18–24 mo

engineered runway

Use of funds

- Engine & product engineering
- Team — growth engineers & behavioural scientists
- Go-to-market & community
- Operations & compliance

Milestones funded: TRL 9 engine · SaaS launch · 25+ retained mandates · advisory board seated

Two disciplines, one decade of trust

Hiya Chugh

Co-Founder & CEO

- Cognitive science and neuromarketing — the behavioural core of the firm
- Diagnostics on 30+ founder-led businesses before the engine was productised
- Founding thesis born from watching isolated campaign execution shut a business down

Vaibhav Saini

Co-Founder & CSO

- BEng Automotive & Motorsport Engineering — McLaren supply-chain exposure; systems thinking from R&D environments
- Education leadership: Team Leader, Internal Verifier and Skills Champion Award at a UK college
- Built the 9-agent engine, the failure-case corpus and the firm's AI-native architecture

Working together since 2015 — a decade of trust before a single share was split. Advisory: CHRO, DCM Shriram — with investor and advisor panel build-out under way.

VEE GROUP

Growth built to endure — not to spike.
